## **Avnet Memec Europe to Acquire Italian Specialist Distributor ESCO Italiana**

Munich, October 10, 2006 -- To further strengthen its Demand Creation business model in the Southern European region, Avnet Memec has acquired the semiconductor and embedded systems specialist distribution company ESCO Italiana, based in Monza, Italy.

Thirty-four-year-old ESCO Italiana is one of the most successful distributors in Italy, with an annual sales turnover of approximately 30 Million Euro. ESCO employs about 60 people and operates from five offices across Italy. In addition, it has distribution activities in Greece and Turkey.

Highly dedicated to premier technical support and Demand Creation, ESCO has been able to develop excellent supplier relationships, among them US Analog, Mixed-Signal, and microcontroller manufacturer Maxim/Dallas. Maxim/Dallas, whose products are distributed by Avnet Memec in France, Spain and Portugal, is a major contributor to ESCO's revenue stream in Italy, Greece and Turkey and is set to enhance Avnet Memec's future value proposition in the analog sector. Other significant suppliers include RF and M2M specialist Wavecom, Varitronix, Epson, Seiko Instruments, CML, Protech Systems, Hitachi Displays, AKM, Leadtek and Digi International

Upon the closing of the acquisition last week, Steve Haynes, president of Avnet Memec, said: 'ESCO Italiana will be an excellent enhancement for our company. Apart from an ideally matching linecard, we found ESCO to have an extremely successful business model, well regarded by customers and suppliers alike. I expect this to be a match of winning spirits between the ESCO team and our Avnet Memec team in Southern Europe, resulting in a fast return of our investment.'

Aurelio Busani, president of ESCO Italiana, commented on his decision to join forces with Avnet Memec: 'Over the last 34 years, we have been very successful in growing our Italian business by applying far more specialist resources to our demand creation and design-in strategy than the typical distributor. ESCO employs 35 product and technology specialists. In order to secure our future growth and the excellent team that we have built, the way forward was to find a partner with a similar model, the same focus on design, and a winning team mentality that would match ours.'

Domenico Camorani, general manager of ESCO, added: 'Avnet Memec has made a splendid start into the business over the last 12 months, is already highly recognized by many customers, and certainly has received much attention from semiconductor suppliers. They operate on a proven ERP system and the logistics backbone of a global company. Avnet Memec and Avnet, Inc. are an excellent home for our talent and expertise.'

Busani and Camorani will stay on board for the next six months and report directly to Steve Haynes, president of Avnet Memec. Both will work closely with Massimo Loche, regional vice president of Avnet Memec, to orchestrate the transition. Over the next few months, the management team of Avnet Memec and ESCO will work together to define and implement a smooth and successful integration plan that will ensure additional added value for the teams, our customers and suppliers.

### **About Avnet Memec**

Avnet Memec is a semiconductor specialist distributor within Avnet Electronics Marketing EMEA, the European components distribution arm of Avnet, Inc. (NYSE:AVT), the world's leading electronic component technology marketing and distribution company. Avnet Memec is headquartered in Poing, Germany, and operates on a pan-European basis. Avnet Memec represents more than 40 suppliers of innovative technologies and serves customers with semiconductor products, complementary technology (displays and software) design expertise and a vast suite of logistical and technical services. Avnet Memec is supported by Avnet Logistics -- also based in Poing -- the distribution backbone of Avnet Electronics Marketing EMEA.
